1. Design and write a class to represent a bank account that includes the following members:
   a. Data members
      • Owner name
      • Account number
      • Balance amount in the account
   b. Methods members
      • To assign initial values
      • To deposit an amount
      • To withdraw an amount after checking balance
      • To display the owner name and balance

2. Modify the above class to incorporate a constructor to provide initial values.

3. Write a main method for the above class that reads in the initial values from the keyboard.
